Barrier-height scan, $V = a(x^2 - 1)^2$, trajectory data
$|\hat{\lambda}_1/\lambda_1 - 1|$ and lag disagreement (median)
W_2 to the target
Mass of the left well
Barrier height a (k_BT)
Barrier height a (k_BT)
Barrier height a (k_BT)
Estimated eigenpairs
FD eigenpairs
Left-well fraction of the data
Chains start in the right well
Lag disagreement
Target reference
Chains start in both wells
